

# Formulation

Tuesday, 1 October 2024 4:35 AM

$$F_j + f_{ij} = \theta_j + \sum_{h, h \in A} f_{jh}$$

$$F_j \leq 17x_{ij}$$

$$f_{ij} = (1-x_{ij}) \left( \theta_j + (1-x_{jm})\theta_m + (1-x_{jn})\theta_n + (1-x_{jl}) \left( \theta_l + (1-x_{lp})\theta_p \right) \right)$$

idea:

define subproblem  $V_{ij} \quad \forall i, j \in A$

Sets

$S_{ij}$  Set of successor arcs of arc  $(i, j)$   
 $\forall (i, j) \in A$

Variables

$f$  ← interruption time on  $(i, j)$

$c_{j, h}$  ← interruption time  $(j, h) \in S_{ij}$

has objective  $\min (\tilde{L}_i - \tilde{L}_j) f$

Constraints

$$c_{j, h} = (1-x_{jk}^*) \left( \theta_k + \sum_{h, h \in S_{jk}} c_{j, h} \right) \quad \forall j, k \in S_{i, j}$$

$$f = c_{i, j}$$

define main problem

Variables

Variables

$$x_{ij} \in \{0,1\} \quad \forall (i,j) \in A$$

Objective

$$\min \sum_{(i,j) \in A} V_{i,j}(x)$$

Constraints

$$\sum x_{i,j} \leq N$$
